

AMENDMENTS TO THE CLAIMS

17. (Currently Amended) A ~~panel for a~~ sectional door having a plurality of hingedly interconnected panels, at least one of the panels; comprising, in combination:

a frame defining at least one central area, the frame including a horizontal member ~~adapted to be coupled to a hinge member for hingedly connecting the panel to~~ another sectional door panel; and

a plurality of material layers received within the central area of the frame and held in place by the frame, the layers being movable relative to each other.

18. (Original) A panel according to claim 17, wherein the frame comprises first and second aluminum extrusions, joined together by at least one weldment.

19. (Allowed) A panel for a sectional door, comprising in combination:

a frame defining at least one central area, the frame including a horizontal member adapted to be coupled to a hinge member for hingedly connecting the panel to another sectional door panel, the frame comprising first and second aluminum extrusions joined by at least one weldment; and

a plurality of material layers received within the central area of the frame and held in place by the frame, layers being moveable relative to each other, wherein the layers comprise a polystyrene core sandwiched between polyethylene skin layers.

20. (Currently Amended) A method for forming a sectional door ~~panel~~ having a plurality of hingedly interconnected panels, the method comprising:

providing a frame defining at least one central area;

inserting layers of material into the central area to be held in place by the frame, and to provide relative movement between the layers; and

coupling a hinge member to the frame ~~to allow the panel to be hinged to and~~ another sectional door panel.
